

Alchemy's iOS Code Test

Your objective is to build a mobile app using iOS that displays stories from Hacker News. The use of third-party dependencies is permitted. The following criteria should be met:

- App is built with Swift and support iOS 12+
- Persist retrieved data using any tech of your choice (AlamoFire, ETC)
- Interface displays a list of top Hacker News stories in a scrollable view
- Tapping a story should open a web browser if the story is an external link.
- Tapping a story should open a new view in the app displaying the story content if it is not an external link.
- Display comments

To submit your test, push your code to GitHub, or send a zip archive containing the code to your contact at Alchemy.

Bonus

- Creative UI/UX
- Allow opening a view with post comments. A story that is not an external link should display the comments below the story content.
- User can login to their Hacker News account
- User can upvote stories
- User can comment
- User can submit stories
- Provide unit tests
- Provide Integration tests
