

iOS Coding Challenge Hints:

- Focus on loading and showing data
- UI Structure (*****These are just recommendations. Feel free to deviate*****)
 - 2 ViewControllers
 - TopStoriesViewController
 - StoryDetailViewController
 - 2 ViewModels
 - TopStoriesViewModel
 - Function to load top stories
 - StoryDetailViewModel
 - Function to load story details
- Recommend UICollectionView and UICollectionViewCell for showing data in a list
- Hacker News API documentation: <https://github.com/HackerNews/API>
 - Retrieving the full list of comments for a post requires recursively going down each comment tree (a comment is an "Item" in the API)
 - I would recommend focusing less on this part, and just focusing on fetching the top level of comments without their subcomments ("kids" array in item response)
